SUMMARY

Senior Information Systems major at Tuskegee University with a strong foundation in C++, SQL, and Python. Experienced in software development and data analysis, with a passion for cybersecurity, full stack development, and building secure, user-friendly applications. Skilled in problem-solving and project-based work, including a capstone project focused on password security and breach detection. Adaptable team player and student-athlete, committed to continuous learning and delivering innovative solutions.

SKILLS

Technical Skills: C++, Python, Java, JavaScript, SQL, R, HTML

Soft Skills: Multitasking, Leadership, Communication, Team Collaboration, Problem Solving

Frameworks/Tools: Linux, Oracle, Visual Studio Code, Microsoft Office, Agile Development

EDUCATION

Bachelor of Information Systems Computer Science *Expected Graduation: May 2026*

Tuskegee University

- Relevant coursework: Data Structures, Database Management Systems, Information Security, Systems Analysis and Design
- 3.55 GPA, Dean's List
- Student-Athlete, Women's Tennis (Conference Champion 2x, All-Conference, All-Tournament)

EXPERIENCE

Cybersecurity Research Intern *Nov 2025 - Present*

Tuskegee University *Tuskegee, AL*

- Researched and documented DevSecOps principles to enhance secure software development practices
- Analyzed and compared common DevSecOps tools and CI/CD pipelines, reviewing 5+ industry-standard tools for security integration
- Identified and evaluated key security metrics and measurements obtainable from DevSecOps tools to support risk assessment and compliance

Academic Coach *Aug 2023 - May 2024*

Tuskegee University *Tuskegee, AL*

- Monitored 10+ students by creating personalized academic plans that improved student GPAs and got them on track to graduate
- Streamlined learning sessions using project planning techniques, resulting in higher grades and getting academic scholarships
- Strengthened communication and leadership by fostering a growth-oriented learning environment

Credential Processor Intern *Jun 2021 - Aug 2021*

GF Sports & Entertainment *Atlanta, GA*

- Processed and verified 200+ credentials for athletes and staff, ensuring compliance with event security protocols
  Troubleshot credentialing system errors in real time, preventing delays during high-profile sporting events
- Coordinated with cross-functional teams to maintain accuracy and confidentiality when handling sensitive data
- PROJECTS

Password Vault with Strength Analyzer and Breach Detection | Senior Capstone Project

- Developed a secure password vault application using Python, focusing on encryption and user authentication
  Built a password strength analyzer to enforce security best practices and improve user awareness
- Integrated breach detection via external APIs to identify compromised credentials in real time
- Applied cybersecurity principles and usability testing to ensure data protection and user trust
- **Student Management Operation System**
- Implemented class design, header file, and a test driver program to validate scenarios
- Developed and tested functionality to simulate real-world student management operations
- Technologies used: C++, Object-oriented programming, Debugging

Database Management

- Created and debugged five relational tables using SQL scripts in Oracle
- Researched and resolved errors to strengthen SQL and troubleshooting skills
- Analyzed table structure and its impact on data storage and queries

Website Development

Developed a dynamic website using HTML, CSS, JavaScript, focusing on interactivity and client-side behavior

- Wrote JavaScript to handle user events, update page content, and enhance user experience Debugged and
- tested scripts to ensure functionality across browsers
